Shopify Developer

Bigcommerce Developer

Employment history

Mar 2023 - Present

Full Stack Developer

Threepieceus - Full Time

- Developed a vehicle fitment gallery allowing users to submit and share vehicle specifications, enabling fitment checks. Implemented a backend solution for submissions and user association on BigCommerce, with images hosted on Google Cloud Storage.
- Integrated third-party services using the BigCommerce API to enhance e-commerce functionalities.
- Created a "Year Make Model Search" feature that retrieves vehicle information from the Turn14 API to match tires and wheels to users' inputs and queries BigCommerce product data.
- Collaborate with designers to create and implement custom widgets, enriching user experience.
- Conduct performance audits and optimize site speed, scalability, and SEO for better visibility.
- Implement targeted optimizations to boost site speed, scalability, and user satisfaction metrics.

Sep 2022 - Aug 2024

Shopify Developer

GloveBox - Contract

- Develop and customize Shopify themes to match branding, enhancing site aesthetics and user experience.
- Implement and configure Shopify apps to improve functionality, leading to higher user engagement.
- Ensure responsive design across devices using HTML, CSS, and React, enhancing usability.
- Optimize website performance for fast loading and easy navigation, boosting user satisfaction.
- Conduct A/B testing and analyze user behavior to improve conversion rates and SEO, driving measurable results.

Oct 2022 - Oct 2023

Full Stack Developer

MindFlow - Contract

- Maintained and enhanced UI using React and TypeScript to ensure a seamless user experience, driving user engagement and satisfaction.
- Leveraged Firebase for data storage and retrieval, and developed functions for personalized email notifications.
- Improved UI/UX by integrating Firebase for data management and automating personalized emails, boosting user engagement and streamlining operations.
- Led feature implementation and resolved bugs based on user feedback, significantly improving website performance and application functionality.
- Developed a Tutor Dashboard to enable tutors to view student test reports and track improvements in reading, test scores, and reading speed.

Mar 2022 - Aug 2022

Frontend Developer

Atomic - Contract

- Worked closely with a team to refactor the existing codebase implementing best practices and better solutions for the existing site functionality.
- Implemented new features such as JWT token consumption and storage, restricted routes YUP, and react-form-hook.
- Implemented Page Builder solution where the state of the page would be wiped out, setup a custom hook to handle automatic save page state.

Apr 2021 - Sep 2021

Software Engineer

ChargeZoom - Contract

- Coordinate regularly with product stakeholders to evaluate and iterate on new product features.
- Worked on integrating multiple third-party payment gateways, allowing users to have multiple options of payment providers.
- Developed Merchant registration, sending requests to a PaymentCloud API on merchant registration, automating the way the sales team would onboard new users to the platform.
